SHAREPOINT 2013 SEARCH ANALYTICS

Analytics have been completely revised in SharePoint 2013. Some of the core tech in the previous FAST release have been fused together with enterprise search to create a new and powerful analytics engine.

SHAREPOINT 2013 SEARCH ANALYTICS

TOPICS

Some
fundamentals

Search
Analytics

Usage
Analytics

Events

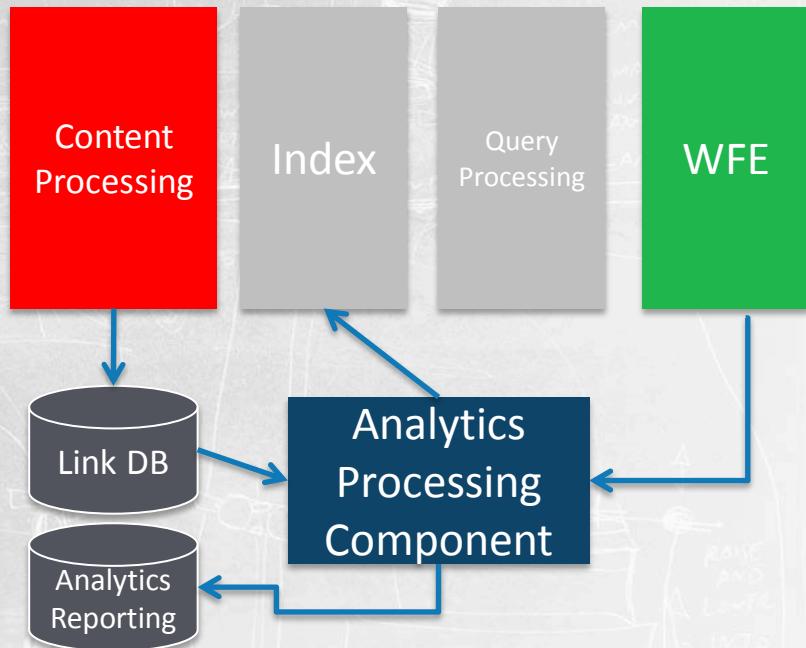

Manage
Analytics

Getting
Reports

SOME FUNDAMENTALS

Architecture:

- *Analytics Processing Component*
 - Hosts the analytics roles Search analytics & Usage analytics
- *Link database*
 - stores information about searches and crawled content. Data in this database is processed from Search analytics role.
- *Analytics reporting database*
 - stores statistical information, such as usage event counts. The information in this database is used to create reports.

SOME FUNDAMENTALS

The different types of analyses:

Analytics Processing Component runs two main types of analyses:

Search analytics

- *analyzes content in the search index,*

Usage analytics:

- *analyzes the user actions.*

Analytics

Search
Analytics

Usage
Analytics

SEARCH ANALYTICS

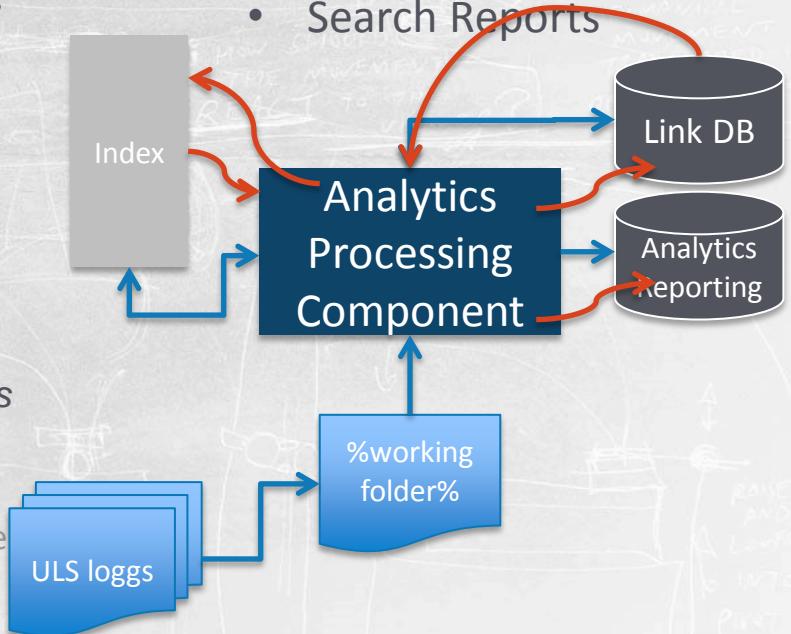

Task 1:

1. Search analytics extracts information such as links and anchor text from content in the search index.
2. The extracted information is stored in the Link database together with information about clicks on search results.

Task 2:

1. The information in the Link database is further processed in several sub-analyses.
2. Information that results from the search analyses is used to enrich items in the search index with information to help improve relevance and recall,
 - and is stored in the Analytics Reporting database
 - and included in reports.

- Analyses in search analytics:
- Anchor text processing
 - Click Distance
 - Search Clicks
 - Social Tags
 - Social Distance
 - Deep Links
 - Search Reports

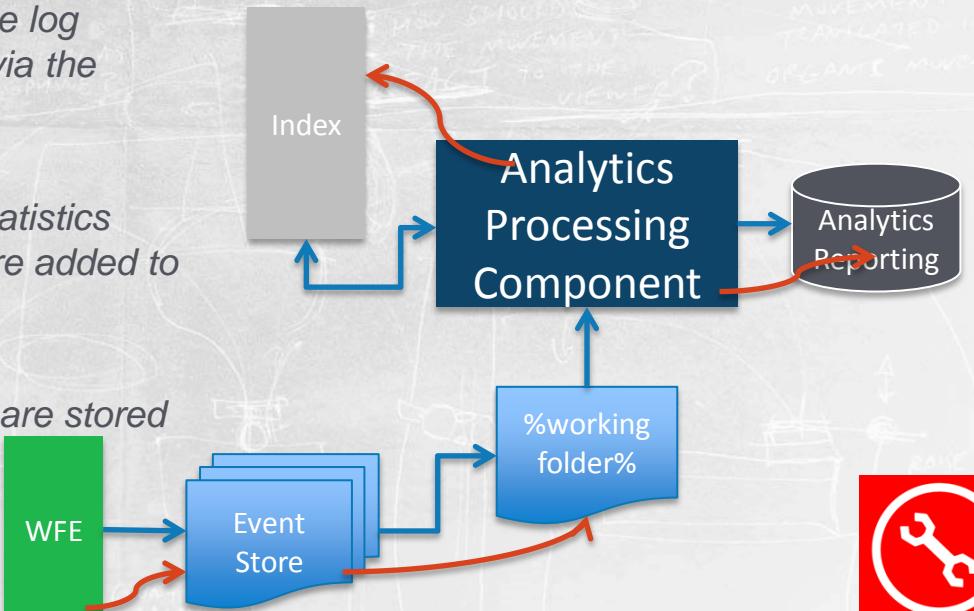

USAGE ANALYTICS

Task 1:

- Usage analytics is about analyzing usage log information received from the front-end via the event store.*

Task 2:

- Usage analytics generates usage and statistics reports. The results from the analyses are added to the items in the search index.*
- In addition, results from usage analytics are stored in the analytics reporting database.*

USAGE ANALYTICS

SharePoint Server 2013 includes the following default user usage events:

- Views
- Recommendations displayed
- Recommendations clicked

In addition to the default events, you can add up to twelve custom events.

All usage events are counted per item, site collection, and tenant.

EVENTS

Usage event types in SharePoint Server 2013

- You can create up to twelve custom usage event types by using Windows PowerShell.
 - A custom usage event has several properties
- You have to add code to the place where the event occurs - for example, when a page loads, or when a user clicks a link or a button.
- This data is then sent to the analytics processing component, where it is recorded and processed.

```
AppEventTypeId : e2f978ff-7be2-4242-1
EventTypeId : 256
EventName : UsefulPage
LifeTimeManagedPropertyName : UsageEvent1LifeTime
RecentManagedPropertyName : UsageEvent1Recent
ApplicationName :
RecommendationWeight : 10
RelevanceWeight : 10
RecentPopularityTimeframe : 14
AggregationType : Count
Rollups :
TailTrimming :
Options : None
IsReadOnly : False
```

MANAGE ANALYTICS

- *Timer Jobs*
- *PowerShell for SharePoint 2013 Analytics Feature*
- *Microsoft.Office.Server.Search.Analytics namespace*
- *Files & Folder Locations*

MANAGE ANALYTICS

TIMER JOBS

Usage Analytics:

- *Usage Analytics Timer Job for Search Application Search*
 - Periodically schedules processing of the Usage Analytics analysis
- *SharePoint Foundation Usage Data Processing*
 - Checks for expired usage data at the farm level and deletes the data
- *SharePoint Foundation Usage Data Import*
 - Imports usage log files into the event store

Search Analytics:

- *Analytics Event Store Retention*
 - Periodically cleans up the Event Store and the Reporting Database
- *Analytics Timer Job for Search Service Application*
 - Periodically schedules analytics for Search Service Application

MANAGE ANALYTICS

POWERSHELL FOR SHAREPOINT 2013 ANALYTICS FEATURE

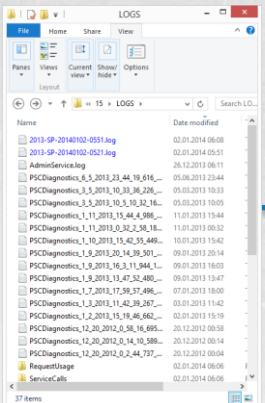

- *Analytics feature is not part of the common SharePoint PowerShell Snapin*
- *get a full list of available commands:*
 - Get-Command -Module analysisenginepssnapin
- *Get / Set settings for component*
 - Get-AnalysisConfiguration [-Name] <string>...
 - Set-AnalysisConfiguration [-Name] <string>...
- *Display all Analytics Job status info:*
 - Get-Analysis

```
#Set up the Analytics powershell environment
Add-PSSnapin Microsoft.SharePoint.PowerShell
Add-PSSnapin hostcontrollerpssnapin
Add-pssnapin junopssnapin
Add-pssnapin searchcorepssnapin
Add-pssnapin enginepssnapin
Add-pssnapin analysisenginelpssnapin
$env:CERES_REGISTRY_PRODUCT_NAME = "Office Server\15.0\Search\Ceres"
Connect-System -Uri (Get-SPEnterpriseSearchServiceApplication).SystemManagerLocations[0]
-ServiceIdentity (Get-SPEnterpriseSearchService)
Connect-AnalyticsEngine -NodeName [node name]
```
