

SharePoint UserGroup Düsseldorf

16. Treffen
Ratingen, am 16.01.2012

- Nächster Termin 16 Januar 2012 18:00 Uhr
- **MVP Double Feature**
- Agnes Molnar – **Best Practices for SharePoint 2010 Search**
- Christian Glessner - **Mega Mergers – Integrating SharePoint and Azure**

- **Christian Glessner** is working as a software engineer at **Experts Inside**. He is a Microsoft Most Valuable Professional (**MVP**) for SharePoint and founder of the CodePlex project and blog "iLove SharePoint" where he shares his ideas and excitements about SharePoint. Christian is a creative thinker, who is passionately engaged with innovative technologies. His current favorites topics include SharePoint development, Azure, dynamic languages, and social computing.

- **Mega Mergers – Integrating SharePoint and Azure**
- SharePoint and Azure are arguably Microsoft's hottest platforms in recent times. While Microsoft SharePoint allows for amazing collaboration experiences, Windows Azure offers virtually unlimited scalability to serve a high-performance computing backend with unlimited scalability. This session showcases how to build combined solutions to leverage the strengths of each platform from a development perspective.

- **Agnes Molnar** is a Microsoft SharePoint **MVP**. With a strong focus on Enterprise Search and Knowledge Management, she has been working with SharePoint technologies since 2001, and has architected dozens of SharePoint and FAST implementations for commercial and government organizations throughout Europe and the Americas. In her role at **BA Insight**, Agnes helps guide the company's product development team, and oversees enterprise-level deployments of the company's technologies in Europe and Asia. A co-author and contributor to several SharePoint books, including Real World SharePoint 2010 and SharePoint 2010 Unleashed, Agnes is a regular speaker at technical conferences and symposiums around the world.

Best Practices for SharePoint 2010 Search - SharePoint 2010 Enterprise Search, especially with the features of the integrated FAST Search is better and more powerful than ever before. In my session, I will answer the following questions:

- When is it enough to deploy the out-of-the-box SharePoint Search, and when do you need to install FAST Search Server as well?
- When is it useful to use SharePoint 2010 as a search engine, and when you should federate?
- SharePoint 2010 Search - FAST Search - Federation comparison matrix
- Why is it necessary to deploy more than one Search site?
- Why is it important to invest the information architecture in order to achieve and effective search architecture?
- What is the connection between the metadata management and Enterprise Search? Best practices of creating a Search-friendly taxonomy.
